Risk and Reward Profile

The fund is categorized as 5. The indicator illustrates the typical correlation between the risk and your potential return of the investment. The categorization is determined by the fluctuations in the fund's net asset value over the past five years and/or representative data.

Significant historical volatility equals high risk and low volatility equals lower risk. Please note that the fund's categorization is not constant and the categorization may change over time. Historical performance data is not necessarily a reliable indicator of the future risk profile.

The risk indicator is purely a mathematical calculation and it does not take devaluations, political intervention and sudden fluctuations in interest rates and currencies into account. Risk class 1 is not a risk-free investment.

The principal risks of the fund are equity risk, interest rate risk, credit risk, market risk and investment style risk. As the fund will invest its assets in both the fixed income and equity markets the changes in the market conditions and interest rates will affect the return of the fund.

For further details about risk, please refer to the following section in the fund's prospectus: "Investment Policy and Restrictions – Risk Factors – Risk Management".
